This notebook contains information from the 2015 administration of the LibQUAL+® protocol. The material on the following pages is drawn from the analysis of responsors the participating intervious collected in 2015.

The LibQUAL+® project requires the skills of a dedicagedup. We would like to thank several alumni members of the LibQUAL+® team for their key roles in the deorgament of this service. From Texas A&M University, the qualitative leadership of Yvonna Lincolnshaeen key to the projectintegrity. The behind-th-scenes roles of Bill Chollet and others from the library Systems and Trainings were also formative ithe early years. From the Association of Research Libraries, were appreciative of contributions made by Consuella Askew, MaShana Davis, David Green, Richard Groves, Kaylyn Groves, Amy Hostetts, tina Justh, Mary Jackson, Jonathan Sousa, and Benny Yu.

A New Measures initiative of this scope is possible only as the collaborative effort of many libraries. To the directors and liaisons at all participating libraries goesdayest measure of gratitude. Without your commitment,

1.2 LibQUAL+®: A Project from StatsQUAL®

I would personally like to say a word about the deve**leptno**f LibQUAL+® over the last few years and to thank the people that have been involved in this effort. LibQUAL+® would not have been possible without the many

libraries utilizing it successfully in thyears to come. I look forward tour continuing active involvement in helping us understand the many ways we can improve library services.

With warm regards,

Martha Kyrillidou, PhD Senior Director, ARL Statistics and Service Quality Programs Association of Research Libraries

1.3 LibQUAL+®: Defining and Promoting Library Service Quality

What is LibQUAL+®?

LibQUAL+® is a suite of services that libraries use to solicit, track, understand, and act upon users' opinions of service quality. These services are offered to the library community by the Association of Research Libraries (ARL). The program's centerpiece is a rigorously tested Wasted survey paired with the library that helps libraries assess and improve library services ruge organizational culture, and market the library. The survey instrument measures library users' minimum, perceived, and desired service levels of service quality across three dimensions: Affect of Service, Informatio Control, and Library as Placehe goals of LibQUAL+® are to:

- Foster a culture of excellence in providing library service
- Help libraries better understand uperceptions of library service quality
- Collect and interpret library user feedback systematically over time
- Provide comparable assessment information from peer institutions
- Identify best practices in library service
- · Enhance library staff members' analytical skills for interpreting, and acting on data

Since 2000, more than 1,343 libraries have participated QUAL+®, including college and university libraries, community college libraries, healthisoces libraries, academic law libraries and public libraries---some through various consortia, others inclependent participants. LibQUAL+® haspanded internationally, with participating institutions in Africa, Asia, Australiand Europe. It has been translated a number of languages, including Arabic, Afrikaans, Chinese (Traditional), Danish, DutEinnish, French, GermaGreek, Hebrew, Japanese, Korean, Norwegian, Spanish, SwahSiwedish, and Welsh. The growingbQUAL+® community of participants and its extensive dataset are rich resources for improving library services.

How will LibQUAL+® benefit your library?

Library administrators have successfully used LibQUAL+®vey data to identify best practices, analyze deficits, and effectively allocate resources. Benefits to participating institutions include:

- Institutional data and reports that enable you to assess whether your library services are meeting user
- expectations
- Aggregate data and reports that allow you to comenyour library's performance with that of peer
- institutions
- Workshops designed for LibQUAL+® participants
- Access to an online library \(\bullet \text{ibQUAL+R} \) research articles
- The opportunity to become part of a community interested in developing excellence in library services

LibQUAL+® gives your library users a chance to ted bywhere your services need improvement so you can respond to and better manage their expectations. You calopdesevices that better meet your users' expectations by comparing your library's data with that of peer institutions and examining the practices of those libraries that are evaluated highly by their users.

How is the LibQUAL+® survey conducted?

Conducting the LibQUAL+® survey requesis little technical expertise on younger. Use our online Management Center to set up and track the progress of your survey. You invite your users to take the survey by distributing the URL for your library's Web form via e-mail or posting a link to your survey on the library's Web site. Respondents complete the survey form and theirswers are sent to the LibQUAL+®talaase. The data are analyzed and presented to you in reports describing your users teach siberceived, and minimum expectations of service.

What are the origins of the LibQUAL+® survey?

assessing service quality in the private sector. The Texas A&M University Libraries and other libraries used modified SERVQUAL instruments for severex those applications reveated need for a newly adapted tool that would serve the particular requirements of libraries, representing the largest research libraries in North America, partnered with Texas A&M University Libraries the velop, test, and refine bQUAL+®. This effort was supported in part by a three-year grant from the Department of Education's Fund for the Improvement of Post-Secondary Education (FIPSE).

1.4 Web Access to Data

Data summaries from the 2015 iteration of the LibQUAL+ \mathbb{R} eyrwill be available to project participants online in the Data Repository via the LibQUAL+ \mathbb{R} survey management site:

http://www.libqual.org/repository

1.5 Explanation of Charts and Tables

A working knowledge of how to read and derive releviaformation from the tables and charts used in your LibQUAL+® results notebook is essential. In additionate explanatory text belowou can find a self-paced tutorial on the project web site at:

http://www.libqual.org/about/about_survey/tools

Both the online tutorial and the text below are designed to you understand your survey results and present and explain those results to others at your library.

Radar Charts

Radar charts are commonly used throughout the following pages to display both aggregate results and results from individual institutions. Basic informion about radar charts is outlinedlow, and additional descriptive information is included throughout this notebook.

What is a radar chart?

Radar charts are useful when you want to look at sedificial entranged from the charts are useful when you want to look at sedificial entranged from the charts are shown by distance from the centre chart. Lines connect the data points for each series, forming a spiral around the center.

In the case of the LibQUAL+® surveresults, each axis represents a differsurvey question. Questions are identified by a code at the end of each is. The three dimensions measured the survey are grouped together on the radar charts, and each dimensidable led: Affect of Service (AS), Infonation Control (IC), and Library as Place (LP).

Radar charts are used in this notebook to present the item summaries (the results from the 22 core survey questions).

How to read a radar chart

Radar charts are an effective way to show strengttdsweaknesses graphically by enabling you to observe symmetry or uniformity of data. Points close to the ceintdicate a low value, while points near the edge indicate a high value. When interpreting a radar chart, it is impoint check each individual is was well as the chart's overall shape in order to gain a complete understanding of its meaning. You can see how much data fluctuates by observing whether the spiral is smooth or has spikes of variability.

Respondents' minimum, desite and perceived levels of service littyrare plotted on each axis of your LibQUAL+® radar charts. The resulting "gaipbetween the three levels are seraith blue, yellow, green, and red. Generally, a radar graph shaded blue and yellow indicates sterat' perceptions of service fall within the "zone of tolerance"; the distance between minimempectations and perceptions of serviculality is shaded in blue, and the distance between their desired and perceived levels of service quality is shown in yellow. When users' perceptions fall outside the "zone of tolerance," the graph will include areas of red and green shading. If the distance between users' minimum expectations and perceptions of service delivery service adequacy gap score. If the atise between the desired level of service and perceptions of service delivery is represented in green, that indicates a positive service superiority gap score.

Means

item on the LibQUAL+® survey. Meansæalso provided for the generatisæction and information literacy outcomes questions.

Standard Deviation

Standard deviation is a measure of the spread of adatand their mean. The standard deviation (SD) depends on calculating the average distarted each score from the mean. If all use the dean item identically, the SD would be zero. Larger SDs indicate more disparate to the users about library service quality.

In this notebook, standard deviations are provided for **emeay**n presented in the tables. In a very real sense, the SD indicates how well a given numerical mean does at representing all the data. If the SD of the scores about a given mean was zero, the mean perfectly represents scores, and all the scores and the mean are all identical!

Service Adequacy

The service adequacy gap score is calculated by subtracting the minimum score from the perceived score on any given question, for each user. Both meand standard deviations provided for serviced equacy gap scores on each item of the survey, as well as each of the three dimensions of library vice quality. In general, service adequacy is an indicator of the extent to which you are meeting the minimum expectations of your users. A negative service adequacy gap score indicates that your users level of service quality is below their minimum level of service quality and is printed in red.

Service Superiority

The service superiority gap score is calculated by souting the desired score from the perceived score on any given question, for each user. Both meand standard deviations provided for service superiority gap scores on each item of the survey, as well as teach of the three dimensions of library rvice quality. In general, service superiority is an indicator of the teach to which you are exceeding the desirexpectations of your users. A positive service superiority gap score inaties that your users' perceived before service quality is above their desired level of service quality and is printed in green.

Sections with charts and tables are omitted from the following pages when there are three or fewer individuals in a specific group.

In consortia notebooks, institution typensmaries are not shown if there is youhe library for an institution type. Individual library notebooks are producsel parately for each participant.

1.6 A Few Words about LibQUAL+® 2015

Libraries today confront escalating pressure to@testrate value and impact. As Cullen (2001) has noted,

Academic libraries are currently ding their greatest challenge since texplosion in tertiary education and academic publishing which began after World War[T]he emergence of the virtual university, supported by the virtual library, calls into question our basic assumptions about the role of the academic library, and the security text future. Retaining and growint geir customer base, and focusing more energy on meeting their custom expectations is the only way facademic libraries to survive in this volatile environment. (pp. 662-663)

Today, "A measure of library qualibased solely on collections has becomeolete" (Nitecki, 1996, p. 181). These considerations have prompted the Associations and Libraries (ARL) to sponsor a number of "New Measures" initiatives. The New Measures efforts represent a collective determination on the part of the ARL membership to augment the collection-count and fiscal input measures that comprise the ARL Index and ARL Statistics, to date the most consistently collected statistics for research libraries, with outcome measures such as assessments of service quality and satisfaction. One Newscars Initiative is the LibQUAL+® service (Cook, Heath & B. Thompson, 2002, 2003; Heath, Cook, Willidou & Thompson, 2002Kyrillidou & Cook, 2008; Kyrillidou, Cook, & Rao, 2008; Kompson, Cook & Heath, 2003hompson, Cook & Thompson, 2002; Thompson, Kyrillidou & Cook, 2007a, 2007b, 2008).

Within a service-quality assessment model, "only cuetorjudge quality; all other judgments are essentially irrelevant" (Zeithaml, Parasuraman, Berry, 1990,6). LibQUAL+® was modeled on the 22-item SERVQUAL tool developed by Parasuraman, Berry and Zeith(Parasuraman, Berry & Zeithaml, 1991). However, SERVQUAL has been shown to measure some issues notupartyicelevant in libraries, and to not measure some issues of considerable interest to library users.

The final 22 LibQUAL+® items were developed through selviterations of studies involving a larger pool of 56 items. The selection of items employed in the LibQUALs@vey has been grounded in the users' perspective as revealed in a series of qualitative dies involving a larger pool of items were identified following qualitative research interviews withusent and faculty library users atveed different universities (Cook, 2002a; Cook & Heath, 2001).

LibQUAL+® is not just a list of 22 stadardized items. First, LibQUAL+® offetibraries the ability to select five optional local service quality assessment items. Setbeetsurvey includes a commte box soliciting open-ended user views. Almost half of the people responding to the LibQUAL+® survey provide valuable feedback through the comments box. These open-ended comments are helpfubfonly (a) understanding why users provide certain ratings, but also (b) understandiwhat policy changes users suggest, becauses users feel the obligation to be constructive. Participating librariesæfinding the real-time access to user commissione of the most useful devices in challenging library administrators to think outsing the box and develop innovative ways for improving library services.

LibQUAL+® is one of 11 ways of listening to users, called a total market survey. As Berry (1995) explained,

When well designed and executed, total market surveys provide a range of information unmatched by any other method... A critical facet of total market surveynd the reason for using the word 'total') is the measurement of competitors' service quality. This [alsophires using non-customers in the sample to rate the service of their suppliers. (p. 37)

Although (a) measuring perceptions of both users and non-asset (b) collecting perceptions data with regard to peer institutions can provide important insights recommended using multiplistening methods and emphasized that "Ongoing data collection... is a necessity sactional surveys, total market surveys, and employee research should always be included" (Berry, 1995, p. 54).

LibQUAL+® Lite

Data Screening

The 22 LibQUAL+® core items measure perceptions of testevice quality, as well as three sub-dimensions of perceived library quality: (a) ervice Affect (9 items, such as "willingness to help users"); In mation Control (8 items, such as "a library Web site enabling me to locate information on my own" and "print and/or electronic journal collections I require for my work"); and (E) brary as Place (5 items, such as "a getaway for study, learning, or research").

However, as happens in any survey, some users providend interest data, inconsistent data, or both. In compiling the summary data reported here, several criteria ward to determine which respondents to omit from these analyses.

1. Complete Data. The Web software that presents the core itemositors whether a given user has completed all items. On each of these items, in order to submistimey successfully, users enturorized a rating of (a)

A total market survey administered to more than 100,000 users, as was LibQUAL+® in 2004 and 2005, affords the

For example, given inadequacy in records at schools, revent sure how many e-mail addresses for users are accurate. And we do not know how manys reges to invite participation were tually opened. In other words, what we know for LibQUAL+® is the "lower-bound estimate" of response rates.

For example, if 200 out of 800 solicitations result in completed surveys, we know that the response rate is at least 25 percent. But because we are not sure whether 800 examplesses were correct or that 800 e-mail messages were opened, we are not sure that 800 is the correct denominator. The response rate involving only correct e-mail addresses might be 35 or 45 percent. We don't know the exact response rate.

Representativeness Versus Response Rate. If 100 percent of the 800eople we randomly selected to complete our survey did so, then we can be assumed the results are representative of all users. But if only 25 percent of the 800 users complete the survey, the representativeness resturits is not assured. Nor is unrepresentativeness assured.

Representativeness is actually a matter of degree. Anedas institutions each with 25 percent response rates may have data with different degrees of representativeness.

We can never be sure about how representative our deates atong as not everyone completes the survey. But we can at least address this concern by comparing the demographic profiles of survey completers with the population (Thompson, 2000). At which university below would one of the confident that LibQUAL+® results were reasonably representative?

Alpha University

Completers (n=200 / 800)

Population (N=16,000)

analysis) . It provides a one-stop dynamic shop $t\sigma\dot{a}pt\dot{b}$ ely analyze results and benchmark with other institutions.

3. Survey Item Summary for Valdosta State University

3.1 Core Questions Summary

This radar chart shows the aggregate resoults be core survey questions. Each same presents one question. A code to identify each question is displayed at thater point of each axis. While questions each dimension of library service quality are scattered randomly throughout showevey, on this chart they are groupet sections: Affect of Service, Information Control, and Library as Place.

On each axis, respondents' minimum, retesti and perceived levels of sees i quality are plotted, and the resulting "gaps" between the three levels (repretisenservice adequacy or see superiority) are shaded blue, yellow, green, and red.

The following two tables show mean scores satethdard deviations freeach question, where is the number for respondents for each particular question. (For a more detaile

8.4 Local Question Summary for Staff

This table shows mean scores of eacthe local questions added by the dividual library or consortium, where is the number of respondents for each particulaestion. For a more detailed explanatof the headings, see the introduction to this notebook.

Question Text	Minimum Mean	Desired Mean	Perceived Mean	Adequacy Mean	Superiority Mean	n
A secure and safe place	6.75	8.25	8.25	1.50	0	4
Ability to navigate library Web pages easily	7.67	8.83	7.00		-1.83	6
Adequate hours of service	7.00	7.50	8.00	1.00	0.50	6
Library orientations / instruction sessions	7.33	8.00	6.67		-1.33	3
Ready access to computers / Internet / software	e 6.14	7.71	7.43	1.29	-0.29	7

This table displays the standard deviation of the local questions addig the individual library or consortium, where n is the number of respondents for example and the introduction to this notebook.

O		Minimum	Desired	Perceived	Adequacy Superiority			
(Question Text	SD	SD	SD	SD	SD	n	
	A secure and safe place	1.71	1.50	0.96	1.91	1.63	4	
	Ability to navigate library Web pages easily	1.21	0.41	1.41	1.97	1.47	6	
	Adequate hours of service	1.67	1.05	0.63	1.55	0.84	6

This chart shows a graphic representation of library use (both on the premises and electronically), as well as use non-library information gateways such as Yahoo™ and ੴgBars represent the frequency with which respondents report using these resources: Daily, Weekly, Monthly, Quarterly, or Never. The table below the chart displays the

Appendix A: LibQUAL+® Dimensions

LibQUAL+® measures dimensions of precived library quality---that is, each receive question is part of a broade category (a dimension), and scores within those categories aloud in order to derive more general information about library users' perceptions of service. These receives were first based on the original SERVQUAL survey instrument (the framework for the LibQUAL+® surveyot; for more information on the origins of LibQUAL+®, go to http://www.libqual.org/Publications/). The QbJAL+® survey dimensions have evolved with each iteration, becoming more refined and feed for application to the library protext. Dimensions for each iteration of the LibQUAL+® surveyare outlined below.

LibQUAL+® 2000 Dimensions

The 2000 iteration of the LibQUAL+® survey, which had questions, measured eight separate dimensions:

- x Assurance (the knowledge and cosytef employees, and their ability convey trust and confidence)
- x Empathy (caring, individual attention)
- x Library as Place (library as a sanctuary/Amaor site for learning and contemplation)
- x Reliability (ability to perform the proissed service dependably and accurately)
- x Responsiveness (willingness to help oursers and provide prompt service)
- x Tangibles (appearance of physical facilities, pquent, personnel and communications materials)
- x Instructions/Custom Items
- x Self-Reliance

LibQUAL+® 2001 Dimensions

After careful analysis of the results from the 2000 survey, the dimensions were further refined to re-ground the SERVQUAL items in the library context. Four sub-dimensions resulted for the 2001 iteration:

- x Service Affect (nine items, sucts "willingness to help users")
- x Library as Place (five items, suals "a haven for quiet and solitude")
- x Personal Control (six items, such as "website enabling me to locate information on my own"), and
- x Information Access (five items, such as "comp**retive** print collections" and "convenient business hours")

LibQUAL+® 2002 and 2003 Dimensions

For the 2002 iteration of the LibQUAL+® survey, the dimensions were once again refined based on analysis of the previous year's results. While the four dimensions were retained, their titles were changed slightly to more clearly represent the questions and data. The samedforensions were also used on the 2003 survey:

- x Access to Information
- x Affect of Service
- x Library as Place
- x Personal Control

LibQUAL+® 2004 - Present Dimensions

After the 2003 survey was completed, factor and reliabilitylyses 7rol

dimensions measured by the survey-Access to Influormand Personal Control-had collapsed into one. The following three dimensions have been measured since then: Affect of Service, Information Control, and Library as Place. In addition, three core items eliminated from the 2003 versiontbe survey, leaving 22 core items on the final survey instrument.

The list below displays the dimensions used to present the results in the 2012 notebooks, along with the questions that relate to each dimension *Note:* The questions below are those used in the College and University implementation of the survey, American English version.)

Affect of Service

- [AS-1] Employees who instill confidence in users
- [AS-2] Giving users individual attention
- [AS-3] Employees who are consistently courteous
- [AS-4] Readiness to respond to users' questions
- [AS-5] Employees who have the knowledge to answer user questions
- [AS-6] Employees who deal with users in a caring fashion
- [AS-7] Employees who understand the needs of their users
- [AS-8] Willingness to help users
- [AS-9] Dependability in handling users' service problems

Information Control

- [IC-1] Making electronic resourcescessible from my home or office
- [IC-2] A library Web site enabling me to locate information on my own
- [IC-3] The printed library materials I need for my work
- [IC-4] The electronic information resources I need
- [IC-5] Modern equipment that lette easily access needed information
- [IC-6] Easy-to-use access tools the mover me to find things on my own
- [IC-7] Making information easily accessible for independent use
- [IC-8] Print and/or electronic journal collections I require for my work

Library as Place

- [LP-1] Library space that impires study and learning
- [LP-2] Quiet space for individual activities
- [LP-3] A comfortable and inviting location
- [LP-4] A getaway for study, learning or research
- [LP-5] Community space for group learning and group study
