Securing the University's digital information, including information communicated through email, is a priority for the Division of Information Technology. This document is intended to help you understand the importance of encryption and how to encrypt your emails that contain sensitive armetrsonally identifiable information (PII).

Learn to Encrypt your Email Messages:

1.

Why do you need to encrypt email

With very little information, an attacker can create false account speal identities and perform other malicious acts sing personally identifiable information (P.P.) ersonally Identifiable Information is data that could be used to identify a specific inductor. Any two or more pieces of identifying data communicated togethere also considered P.E. xamples of P.I. that incorporate sensitive data include barre not limited to the following:

- x Full rame
- x Birthdate
- x Birthplace
- x Social Security Number or Driver's license
- x Student/employee identification number, or any other personal ID number
- x Financial account number or credit card number
- x Regulated Information: Medical Information (HIPAA dataWtf-1.71(,)1.1 ()E (I)-1.5 a (c)3.7

How to encrypt email

Encrypted emails must be sent and received through UOffice 365 Web Client.

To enable the Do Nofforward function only without encryption	
 Within the encryptionbanner, click the Change Permissidims > SelecDo Not For from the dropdown menu > Click. 	ward

A banner will appear that read®o Not Forward:
